IC Lights Introduces *Triangle* Wall Sconce Lighting Fixture

Lakeville, MA... The **IC Lights** Division of **ImageCrafters Inc.** is the leading supplier of Rail, Cable, and Recessed low voltage lighting systems to the CEDIA specialty audio/video marketplace. IC Lights is proud to introduce a new model, the *Triangle*, to its line of low-voltage wall sconce fixtures.

This stylish metal wall sconce is available in six handsome finishes (Black, White, Nickel, Brushed Nickel, Penny, and Brass) matching virtually any décor. Fully dimmable, the *Triangle* sconce provides an ideal lighting solution for home theaters, eliminating direct lighting from the fixture's face. All light is reflected off the wall or the ceiling, dramatically improving the image of two piece projection systems or direct view monitors. It also eliminates harsh direct light that can make it difficult to see proper black levels. The *Triangle* is featured in some of the finest theaters in the country, including the TMH 10.2 System featured at Bjorn's AV in San Antonio, TX.

IC Lights products are available through Specialty AV Dealers nationwide. Contact ImageCrafters at www.imagecraftersinc.com or 508-947-0420.

Note: Publication quality 4 x 5 inch 300 dpi CMYK color scans are available on the ImageCrafters website or by e-mail.
